

CLEANON - CHOOSE PURE INNOVATION

The new Opoczno CleanOn bowl.

cleanON[®]

Lack of inner rim
means lack of place
for dirt and germs

Special shape of the edge
directs water stream to
effectively wash
bowl's interior

Water flows around the
whole interior of the bowl

HOW DOES CLEANON WORK?

Traditional toilet bowl

Traditional solutions in toilet bowls and WC compact sets involving an inner rim make it difficult to thoroughly clean hard to reach areas. Bacteria and dirt accumulate in the recesses. They are difficult to remove, even when using strong cleaning agents. An additional problem is that these areas are not visible.

All this makes cleaning toilets very time consuming and requires the use of large quantities of detergents and a specially profiled brush.

The CleanOn bowl

The solution to this problem is rimless bowls. The rimless CleanOn Opoczno technology ensures that the bowl is perfectly clean. The lack of an inner rim prevents the accumulation of bacteria, and allows for thorough cleaning and flushing of the inner surface of the bowl.

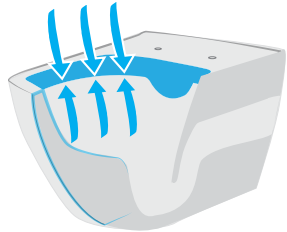

THE NEW CLEANON TOILET BOWL

NPD News 2016

- **different from traditional toilet bowls**
 - **specially contoured**
 - **no rim under which dirt and germs can accumulate**
 - **water reaches every area that it's supposed to**
- 

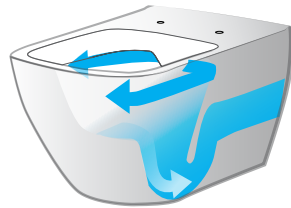

THE NEW CLEANON TOILET BOWL

NPD News 2016

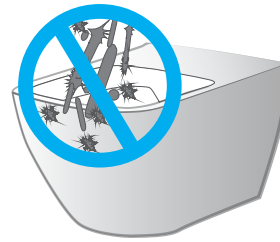

CleanOn technology

the inner rim has been removed from the edge of the bowl making entire surface easy to clean

innovative water flushing system

innovative water circulation helps ensure that all surfaces are thoroughly cleaned, the water easily washes the whole interior of the bowl, thoroughly flushing it

no place for dirt and germs

no recesses where dirt and bacteria can accumulate, which means the toilet remains clean for longer

Perfect Clean coating

the Perfect Clean coating reduces surface porosity, minimizing scaling and dirt

the highest hygiene standard

CleanOn allows you to maintain the highest standards of hygiene, because such toilets are extremely easy to keep clean, without strong detergents and without effort

Metropolitan

Urban Harmony

Street Fusion

The new CleanOn technology has been applied in toilet bowls and WC compact sets in 3 new Opoczno series, extending the existing offer. This advanced solution allows to easily maintain the hygiene of the toilet, it increases its comfort of use, and furthermore it greatly reduces the time required to maintain the cleanliness of the bathroom.

Perfect Clean

All of Opoczno's ceramic products have an innovative hydrophobic coating.

INNOVATIVE FLUOROPOLYMER (HYDROPHOBIC) COATING

The standard ceramic surface is only seemingly perfectly smooth. Under a microscope, the porous surface with many sockets is visible. Mineral substances contained in water settle in the sockets of the surface and create residue that is difficult to remove. Opoczno's ceramic products have a PERFECT CLEAN coating applied during the production process, which removes surface porosity, not giving residue a chance. It also reduces surface energy, and so repels water, which in the form of small droplets flows freely over the surface without leaving residue.

Typical ceramics

Water molecules penetrate the porous surface, leaving residue.

Opoczno ceramics

SMOOTH SURFACE
without porosity, where residue is left

REPELLING WATER
small drops of water „roll off” the surface

new products from the Opoczno ceramics series

In 2015, Opoczno introduced a series of high-quality sanitary ware and bathroom furniture with an elegant, balanced design, in three different styles. The Metropolitan, Urban Harmony and Street Fusion series have simple forms, optically light shapes and toned-down colours of furniture.

Additional elements have been added to these series recently, extending the brand's offer by, among others, products with the innovative CleanOn technology, as well as new, more elegant, flat toilet seats. The Urban Harmony series also now features the currently popular semi-recessed basins, as well as a standing bowl to be used with a concealed cistern frame.

The Metropolitan CleanOn wall hung bowl

The Metropolitan series now features the innovative CleanOn toilet bowl. This is the latest solution on the market, which significantly increases the comfort of use and matches ceramics with modern, minimalistic shapes.

With the introduction of the CleanOn technology for toilet bowls and WC compact sets, as well as the possibility to freely select and match the elements of the set, the Urban Harmony series has gained a large number of variants. Compact bowls, either standard or CleanOn, can be combined both with a rectangular and a semi-circular cistern, while additionally selecting a classic toilet seat, or a more modern flat version. Similarly, the two types of wall hung bowls can be combined with one of the two types of seats. The new, slow-closing, flat seat possesses a system that enables easy disconnection by just pressing one button.

New products in the Urban Harmony series:

- CleanOn wall hung bowl
- standing toilet bowl
- CleanOn compact bowl
- rounded water tank
- flat toilet seat
- semi-recessed washbasin

The standing toilet bowl is a new addition to the series. This allows you to select between a wall hung version and a standing toilet bowl version. Both bowls can be combined with a classic seat or the new, flat seat.

The Urban Harmony series of washbasins has a new addition - the currently popular semi-recessed basin. Thanks to this, there are more arrangement possibilities of an Urban Harmony bathroom. A semi-recessed basin can be combined with an individually designed countertop, which will give the bathroom a unique character. The compact Urban Harmony bowl can be combined with the classic rectangular cistern or with the new lighter, semi-circular cistern.

New elements in the series

In the Street Fusion series, we applied the CleanOn technology, both in the toilet bowl and in the WC compact set. We recommend the new seat with a modern, flat design, to be combined with either of these two products. These solutions significantly improve the standard of the products, both in terms of functionality and design.

New products in the Street Fusion series

- CleanOn wall hung bowl
- CleanOn compact bowl
- flat toilet seat

New elements in the series

Similarly to the wall hung bowl, the WC compact set is available in the traditional version with a rim and in the CleanOn version. We applied a new solution to the toilet seat, the so-called „one button” - easy disconnection of the seat by just pressing one button.
